

TrailerGUARD™ Telematics

The Best Guardian
of Cooled Transport

Invoice your trailers for every moment they are used while simultaneously reducing your administration and maintenance costs.

The most
RELIABLE trailer
telematics system at
AUTOMOTIVE
quality level, and in your
own language.

How to efficiently fulfill HACCP requirements?

How to ensure the integrity of temperature sensitive cargo?

How to decrease the risk of cargo theft and trailer theft?

How to optimize the maintenance of your cooler?

IMAGINE

You integrate the online temperature data to your IT system. Save up to 1500 Euro per trailer per year.

You are alerted as soon as the temperature exceeds the limits. Save the cargo

You are alerted when the trailer couples or when doors are opened. Alarm the police or the driver.

You increase the utilization of your fleet, and plan maintenance of trailers more efficiently. Optimize your operational costs.

TrailerGUARD Telematics

SEIZING OPPORTUNITIES FOR OPTIMAL CARGO CONTROL

HACCP

Hazard Analysis and Critical Control Points (HACCP) is an international standard for food safety management. It requires companies to keep record of supplies and processes throughout the food supply chain.

Temperature history during the transit of the cargo is one of the required data recordings. It proves that appropriate refrigeration temperatures were respected throughout the supply chain.

Online temperature data

TrailerGUARD records the temperatures in the trailer and transfers the data to a central database, which is accessible online for TrailerGUARD users.

Alarms for interventions

TrailerGUARD provides real-time alarms: when the temperature exceeds a minimum or maximum limit, when the doors are opened, when the trailer is coupled, when the trailer arrives at or leaves a specific location, and other types of events. This allows your dispatcher or customer to act immediately if required.

Objective proof

TrailerGUARD provides objective data and transparency, helping the dispatcher to prove when the trailer arrived at or left a specific location, or prove that the trailer doors were not opened since the trailer left the loading area.

Secure parked trailers

TrailerGUARD allows you to monitor the trailer even when it is parked in a non-secured area and not coupled to a truck. Combined with Trailer Immobilizer, it will help you to protect against trailer theft and cargo theft.

REDUCING HIDDEN COSTS ON YOUR TRAILER

Reduce administration costs

Online access to the temperature history and ERP integration will eliminate data recorders and trailer printers, and avoid the manual administration of paper-printed temperature recordings, both at the vehicle owner and at the cargo owner. This can save up to 1,500 Euro per vehicle per year.

Reduce maintenance costs

As manufacturer of the trailer electronic braking system (EBS) and suspension system, WABCO is best positioned to inform your service manager in real-time on brake wear status, mileage and other EBS information, and cooler working hours and cooler status. It does so in multiple languages.

TrailerGUARD and WABCO keep your vehicles on the road, with support from our extensive international service network

EBS status

Km status

Axle load

Break wear

Reliable investment

Similar to our braking and suspension systems, WABCO TrailerGUARD has passed highly stringent automotive quality tests to ensure you a long lifetime, high reliability and a long lasting investment.

Do you want to earn more money with your cooler fleet? If so, let's talk.
