

ESCsmart™ Electronic Stability Control

Engineered to fully comply with ESC legislation for commercial vehicles worldwide, this active safety system improves vehicle stability during highly dynamic driving maneuvers.

Yaw Control

Helps avoid skidding

- Determines the vehicle's movement around its vertical axis
- Automatically intervenes in situations where vehicle stability is at risk
- Autonomously reduces engine torque and applies the vehicle's brakes to individual wheels

Roll Stability Control

Helps prevent vehicle roll-over

- Determines the vehicle's movement around its longitudinal axis
- Automatically intervenes in situations where vehicle stability is at risk
- Actively controls the engine and the service brakes
